*Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1,10-12,14,15 are rejected under 35 U.S.C. 102(e) as being anticipated by Daum et al (6859664).

See figure 1, and col. 5, line 62, which teaches the application of a test pulse.

Col. 6, lines 55+ teach measuring an electric field, and estimating a DFT. Col.

11, lines 30-33 teach using any combination of electrodes to obtain the electric field.

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-9,16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daum et al.

Art Unit: 3762

To measure the DC resistance, as set forth in claim 2, would have been obvious since it is well known to measure if a proper lead or electrode configuration is connected to the pulse generator before pulses are delivered to the heart. Such insures against the incorrect lead or electrode combination being used. Further, to sense R waves of the patient's heart is considered to be standard in the art, since the R wave is the most prominent part of the ECG. Also, the methodology of claim 16 is considered to follow obviously from teaching of Daum. Still further, to compute a threshold average would have been obvious since such would cancel out the extremes and provide a more accurate computation of DFT.
